

**"VERSATOOL" CONVERTS IT INTO DRILL,
PUMP OR OUTBOARD MOTOR**

Make Your Chain Saw Work Harder

Now you can make your chain saw work harder with "Versatool", an adaptor that turns most any chain saw into a pump, drill, power generator, brushcutter — and even an outboard motor!

The attachment retails for about \$30 and fits almost all standard chain saws. All attachments fit to the adaptor in seconds, and a rotating gear allows the tools to operate at any angle.

What can you do with your converted chain saw? Here's the list:

1. *Cut brush.* Standard Duraflex blade head accepts any 1 in. arbor blade. \$80.
2. *Run a boat.* Makes your saw an outboard motor that attaches to anything from a sailboat to a raft. \$100.
3. *Generate electric power.* Generates 500 watts of portable power, 115 volts AC or DC. Has 12-V battery charger. \$190.
4. *Pump water.* Lightweight 6

gal/min. pump uses standard garden hose for pumping out basements, pools or boats and sells for \$40. Heavy duty 80 gal/min. pump. \$160.

5. *Trim hedges.* Chrome blades and 30 in. cutting length. \$100.

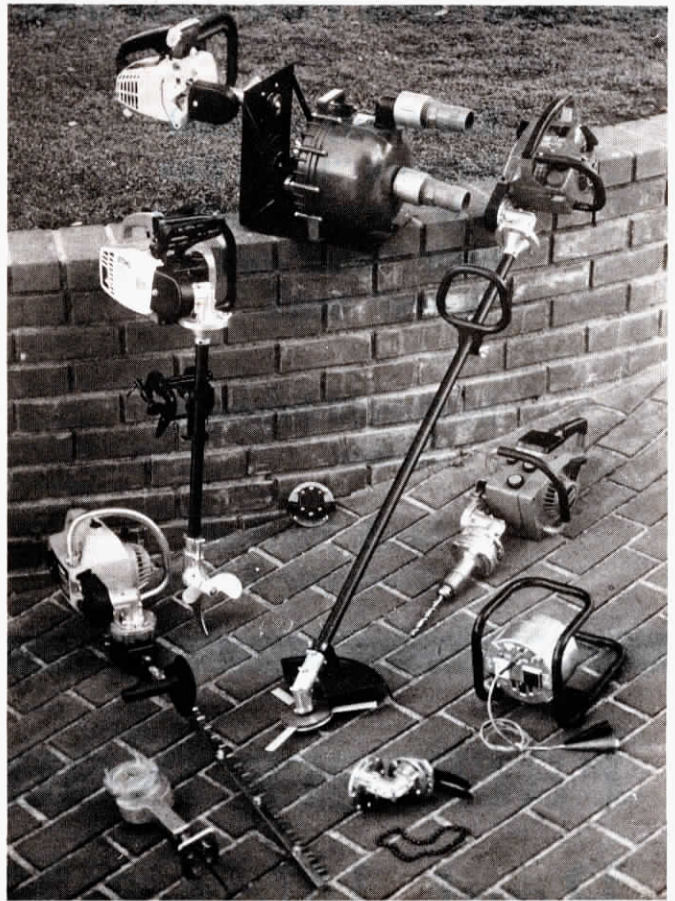

6. *Saw masonry or metal.* Converts to a reciprocating saw that cuts through metal, concrete, plaster or wood. \$90.

7. *Drill holes.* Standard drill chuck adapts it for any bit up to 1/2 in. \$80.

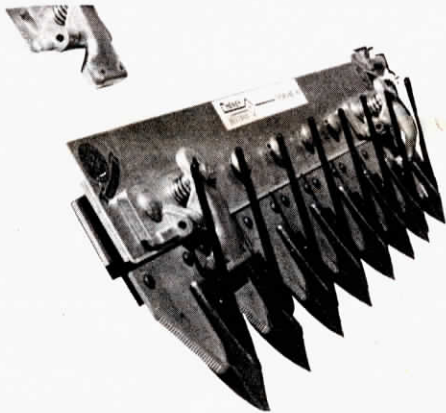

With Versatool attachments, you have a full line of tools and equipment "for about half the price of buying the individual pieces," the manufacturer points out.

Distributors and dealers are located throughout the U.S. and Canada. Dealer inquiries are welcome.

For more information, contact: FARM SHOW Followup, Versatool, Inc.; 7420 San Fernando Road; Sun Valley, Calif. 91352 (ph 213 767-2903).

All these chain saw accessories are available from Versatool.

"Slobber Stoppers" plastic fingers glue to top of each sickle guard.

**PLASTIC FINGERS KEEP GRAIN FROM
TRICKLING BACK OVER CUTTERBAR**

Special Guards Stop Sickle 'Slobber' Loss

You probably don't know how much grain slips back over the cutterbar after it's cut in the field but best guesses say it's plenty. Cheney Weeder, of Spokane, Wash. has come up with a "Slobber Stopper" to catch that grain before it slobbers back to the ground.

Slobber Stoppers are plastic fingers that glue to the top of each cutterbar sickle guard. Inclined at an angle pointing into the combine, they catch plant stems that try to slip past. As the grain is held, fingers on the reel drop down and rake it into the feeder auger.

"You can't make a profit from your wheat unless you get it into your combine. Our Slobber Stoppers will

make a profit for you each and every minute you run your combine," says Brant Kollar, manager of Cheney Weeder.

Slobber Stoppers sell for 85 cents each. A 24-ft. cutterbar costs about \$85 to outfit. To install, you simply grind down the rough surface of the guard and glue the plastic guards with Cheney's special 3M glue. Steel fingers, which you can weld into place, are also available.

For more information, contact: FARM SHOW Followup, Cheney Weeder Inc., PO Box 232, Spokane, Wash. 99210 (ph toll-free 800 541-5880 outside Washington, or 800 572-5600 in state).

**PREVENTS EXPENSIVE BREAKDOWNS
WHERE HEAVY DUTY SCRAPERS ARE USED**

New "Tire Saver" For Deere Planters

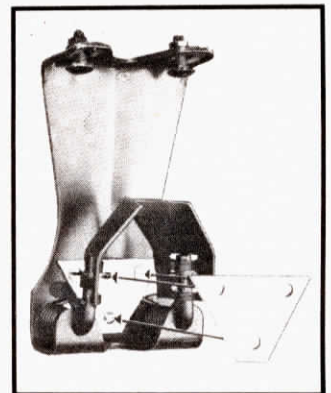

Ruin no more packer tires on your John Deere Max-Emerge planter. A specially-designed plate, called Save-A-Tire Spring Retainer, can be obtained at farm implement dealer stores to keep scrapers in place.

Costing only \$2.50, the small plate comes drilled and with the necessary bolts to install on Deere planters equipped with heavy-duty scrapers, says manufacturer Bob Messer, of Windom, Minn.

According to Messer, "The problem the Save-A-Tire solves is that when heavy-duty scrapers are used, the spring sometimes pops out of the scraper bracket, resulting in a loose scraper which then turns around and hits the packer tire located right behind the disk that the scraper is mounted on. The tire then gets cut up and must be replaced — at a cost of \$25 or more."

The Save-A-Tire fits any Deere Max-Emerge planter, but is needed only with heavy-duty scrapers which are used in heavy soil.
