

How To Stop Leaks

SealLube seal expander is said to stop any rubber oil seal leaks in engines, transmissions, power steering and hydraulic systems. Problems it can solve include oil leaks of all kinds, and transmission slip. The product is not designed to be used in brake systems. An 8-oz. bottle treats up to 10 quarts of oil. Small motors, pumps, gearboxes, or other applications where there is only a small volume of liquid, can usually be sealed with just a teaspoon or so, either added to the fluid or painted on the seals on the outside. We accept Visa, Master Card, American Express, and check cards.

Sells for \$14.95 plus \$4.80 S&H.

Fence Mower mows under fence lines and maneuvers around fence posts.

“Fence Mower” - A New Tractor Implement

FARM SHOW Magazine first introduced this unique piece of farm machinery back in 2005. Since then the Fence Mower has grown in popularity with farmers and ranchers as an easy way to keep their fence lines clean and looking great.

The company, Wright Manufacturing, now has 3 models to choose from and has over 400 fence mowers in operation in 44 states and Canada.

“We manufacture our Fence Mowers

as orders come in and ship directly to the customer. What started as an idea has now turned into a business. We would like to thank the people at FARM SHOW helping this product become a success,” says Larry Wright, president.

Trench-Digging Wheels For ATV's

“Turn your ATV into a ditching machine by simply removing the stock wheels, bolting on Trench Wheels, and driving through your fields making trench tracks, which drain unwanted water off your crops,” says Steve Raguse, inventor-manufacturer of new trench-digging wheels.

Trench Wheels are narrow V-shaped wheels featuring steel rims and solid rubber tires with aggressive lugs which enable farmers to drive through mud and standing water making trenches for water to drain.

“We’ve had tremendous response. Farmers in the Red River Valley love these wheels,” he says. “After attending the National Farm Show in Louisville, Ky., farmers all over the nation are using Trench Wheels.”

The wheels pay for themselves many times over by draining excess water in spring time to get in fields earlier. However,

Wheels make a 3 to 5-in. deep trench in muddy ground. Deeper trenches can be made by making repeated passes in the same tracks. Works great for draining water away from flooded fields.

the wheels make the most money for farmers, by draining water off seeded and growing crops after heavy rains. Trench Wheels are an excellent water management tool.

A set of four Trench Wheels sells for \$1250.
