

Steering Stabilizer For Dodge Pickups

Anyone with a late model Dodge pickup will love this "steering stabilizer" kit designed for Dodge 1500, 2500, and 3500 pickups made from 1994 to 2002, and 2500 and 3500 pickups made from 2003 to present.

The kit is designed to provide additional support of the steering sector shaft and eliminate sector shaft play in the steering box. It also helps keep the pickup frame from flexing at the steering box mounting point.

The stabilizer uses existing mounting holes. It adds an outboard support bearing to the sector shaft. This additional bearing is attached to the lower end of the sector shaft by way of a replacement nut which has an integral shaft extension. The bearing supplied is a regreasable high quality unit available at most ag outlets. Nearly all the sector shaft load is carried by this outboard bearing, thus relieving the steering box of much wear and tear.

Installation takes about a half hour and requires no drilling or welding.

It solves the problem of too much play in the steering sector shaft, and the kit has been popular with owners of both older and newer pickups. It can be used on pickups equipped with snow plows, front receiver hitches, or tow hooks.

The company also offers a retrofit kit for 1994 to 2002 Dodge pickups to allow use of the Solid Steel Ind. rubber bushed track bar. This eliminates one more problem that plagues these pickups.

The steering stabilizer sells for \$209 (U.S.) plus S&H. It comes with a money-back guarantee. (Toll-free order line: 866 211-1533).

A New Solution For An Old Problem

Losing calves, sheep, goats and poultry to night predators will end without harming them and use the sun for power.

Nite Guard is a solar-powered, flashing red light that turns on and off automatically each night and morning - and it totally repels night predators. It almost sounds too good to be true. However, this unique product is currently being used by thousands of farmers and ranchers to protect their livestock.

Animal behavior studies have scientifically proven that all night predators fear being "watched". Nite Guard mimics the "eye" of another animal that could harm these predators. They feel threatened and leave the area. However, domestic animals and pets are not affected. Raccoons, possum, fox, skunk, bear, cougar and coyote will leave your area alone - owls and hawks also are repelled by the Nite Guard light as well. The results are amazing.

Environmentally friendly, using only the sun or daylight to power them, this unit is weather sealed, small and compact (measures just 2 1/2 in. wide, 2 in. high, and 1 in. deep). It will operate to 20 degrees below zero and is protected against rain, snow and ice.

No more electric fencing, no more need for guard dogs or the nasty time consuming job of trapping critters that are killing the

livestock you worked so hard to raise. A typical arrangement of four lights will cover many acres as the lights are visible from 1/2 mile away to a predator.

Nite Guard is not a strobe-type light and will not be annoying to you or your neighbors. At \$29.95 per unit, they will begin to pay for themselves the very night they are installed. As an added bonus, Nite Guard lights give the impression of a security system in place and will give human intruders something to think about.

Nifty Brush Puller

This idea has been around a long time, but FARM SHOW contributing editor C.F. Marley says it's worth reminding people about a simple idea that works great.

The "brush strangler" consists of a piece of thick-walled pipe with a short length of chain welded to the side. It's used to yank out brush and small saplings.

"If you just try to pull brush with a chain wrapped around it, the chain will slide up and off. The pipe bites into the brush or sapling and lets you rip it right out of the ground," says Marley.

You simply run a chain through the pipe, around whatever clump of brush you want to pull out, and hook up to the short chain on the side of the pipe.
