

Heavy-duty Taylorlia single and dual output gearboxes are available from Beiler Engine and Mfg.

Dual PTO For Stationary Engines

Why settle for either 540 or 1,000 rpm pto shafts on stationary engines when you can have both? Heavy-duty Taylorlia dual output gearboxes are available from Beiler Engine & Manufacturing.

"Our first prototype was installed in the fall of 2003, and it's still working," says Beiler. "Many tractors have the option of the two speeds. This gearbox lets stationary engines have that option, too. A great way to make use of that idle engine. Saves you an extra tractor. Our customers use them on both mobile and stationary power sources for use with irrigation pumps, manure pumps, silage blowers and many other uses."

Beiler says the dual output unit is rated for up to 175 hp at three engine speeds - 1,800,

2,150 and 2,400 rpm's. The cast iron clutch housing is available in sizes no. 4, no. 3, no. 2 and no. 1.

He says the unit is simple to install and fits most SAE standard diesel engines. The unit is available with 10 in., 11 1/2-in. single or 11 1/2-in. double plate mechanical clutches.

Beiler says they also offer a single output unit that's rated at up to 250 hp. It has only one set of gears and can be run at either 1,000 or 540 rpm's, depending on the needs.

Mini Salt Shotgun Makes Killing Bugs Fun

You can shoot flies, spiders, bees, wasps or any other insect with the Bugblaster. It turns any pellet gun into a mini "shotgun" that shoots ordinary table salt. It's fun and allows you to kill pests in your home, yard, and outbuildings. You can shoot them in places you could never get with a flyswatter. "If you can see 'em, you can shoot 'em," says Martin Jenson, the inventor.

The Bugblaster is made from a combination of black plastic and stainless steel tubing. It attaches and detaches in seconds to an assortment of airguns.

The unit shoots only a small amount of salt in each blast. The salt never comes in contact with the air gun eliminating any corrosion. Each time you pull the trigger the compressed air or gas picks up a measured amount of salt and shoots it out in a powerful burst.

Bugblaster is available in three models:

Stainless steel tube on Bugblaster inserts into pellet gun's muzzle.

.177, .22 caliber and 6 mm for airsoft guns. Most people prefer CO2 pellet pistols but some pneumatic pump up pistols work very well also. The more powerful the airgun, the more deadly the blast of salt. Jenson's favorite gun is the 2240 by Crosman because it is powerful and relatively inexpensive. The 2240 can be ordered along with the Bugblaster.

The Bugblaster has been sold in every state in the U.S. and many in Canada. The response from customers, both men and

Pond Aerating Windmill

You'll like this "no electric" wind-powered pond aerating windmill from American Eagle that generates pressurized air to keep ponds fresh.

Made in the U.S., it has a 4-legged tower for more stability. A bellows pump generates air in the pond to combat algae and aquatic weeds. It also prevents winter kill of fish and improves water quality.

Distributor Joe Mescan has been in the pond aeration business for 26 years.
