

**New: TreePuller Timberline Tree & Post Puller**

**Model HTC-14 can cut a 14-in. tree at ground level in 5.5 seconds. All major pivot points are machined and greaseable for long life.**

## Timberline™ Tree Shears Rotate

The innovative Timberline™ Tree Shears from Sidney Manufacturing offer many advantages when it comes to the job of selectively removing unwanted trees; including the ability to rotate after the cut. The Timberline™ Tree Shear hydraulically rotates up to 110 degrees, with a push of a button from the comfort of your cab. This feature allows the shear to serve as a grapple to lift, wrangle and carry the fallen tree. You can also use the Timberline™ Tree Shear to easily and efficiently cut the tree into load size or firewood size pieces; reach high to trim large branches; or reach over fences and other obstacles.

The HTC-14 cuts a 14" tree at ground level in 5.5 seconds; the smaller TBL-1000 has a 10" capacity. The single blade design of the Timberline™ Tree Shear eliminates complicated adjustments and sharpening and the unique serrated tooth configuration holds the tree during the cutting cycle allowing for predictable cutting. Made from high tensile steel plate, all major pivot points are machined and greaseable for long life. This world class attachment is the professional's choice for land and tree management.

Also available from Sidney Manufacturing is the Gorilla Grapple, a powerful grapple designed to fit most skid steers. Manufactured from high tensile 1" thick steel, the grapple can handle debris, large trees, big hay bales, salvage yard scrap, and even crush concrete slabs. "Designed by grapple customers to handle anything a skid steer can handle."

Sidney also offers a wireless control option allowing the operator to wirelessly activate the electric diverter on the Timberline™ Tree Shear to alternate between shearing and hydraulic rotation; increasing the ease of operation and reducing installation time.

The newest innovation from Sidney is their Timberline™ Tree & Post Puller, designed to grip up to a 10" diameter tree or post; it can rip out an 8" diameter tree, root system and all. Reinforced throughout to withstand rigorous use, universal skid steer coupler is standard.

Timberline™ Tree Shears can be effortlessly mounted on a variety of available Skid Steer Loaders, Compact Excavators, Telehandlers and Ag Tractor Loader Arms.

### Reader Inquiry No.15

With the push of a button, Timberline™ Tree Shears rotate up to 110 degrees from horizontal.

## IH "Disgusted" Shift Kits

"If your older IH tractor sometimes slips out of gear or does not go into gear, or if you're just frustrated with the way it shifts, we can probably help," says Otto Wenz of Wenz Service, Inc. "We had some of the same problems with our own tractor and figured out a way to fix it that worked better than anything we could find.

"We now offer complete kits to solve shifting problems for IH models from the 706 up to the 6788. Most of the problems with these tractors come from the gears in the transmission not being fully engaged. Different tractors need different parts, so while we do have complete repair kits, we'd prefer to sell only the parts needed. For this reason, farmers or their mechanics should call for parts and prices.

"All of our transmission repair parts are guaranteed. We guarantee the '06 series parts for the life of our business. Kits for most other models come with a 10-year guarantee. We've been in business for more than 50 years and have sold more than 5,000 of these kits over the past 32 years. The cost of repairs with our kits are usually less than half the cost of using parts from Case IH.

"In addition to IH transmission repair parts, we also sell a number of new after-market parts for almost any make of tractor. Our parts cost a lot less than most places for most brands. We usually can analyze the problem over the phone, so that you can make an informed decision. We ship all over the world."
