

## “Bucket Basket” Mounts On Either End Of Tractor

Do you own a tractor with a front-end loader and need equipment for elevated work? If the answer is yes, you may have an interest in the Bucket Basket!

P3 Manufacturing has a new lift the Bucket Basket designed to mount on the bucket of any front-end loader. It provides a safe secure work platform for doing elevated work that meets OSHA and ASME standards, and can be mounted in a couple of minutes and requires no tools.

The Bucket Basket can also be 3-pt mounted and is equipped with tailgate that can be used for a work bench, a large rear

excess door, loading ramp, or as an extended platform to carry large items.

A dual receiver hitch can be used on either the front or rear of the Bucket Basket for moving or towing a trailer.

**“Bucket Basket” provides a safe work platform with work space for 2 people.**

**Demo Air Net filter/net fits over discharge end of a fan and is secured with a bungee cord. It can be used for everything from workshops to barns and homes.**

## Simple New Air Cleaner Keeps Buildings Dust-Free

“Simple gets it done,” says Patrick Sheehan about the air filtration system he developed. Patrick learned how to control lots of air in Jet Propulsion school. But the simplicity of his Demo Air Net took about 10 years of testing different fabrics to find the one that traps dust particles down to 5 microns. That makes it ideal to work in any place with dust, debris and particles – from workshops to barns to homes under renovation. Set up is simple: slip the net/filter on the discharge end of a fan, and secure it with a bungee cord.

“I wanted it to be very durable, washable and as effective as possible,” Sheehan says. It’s also important to him that the Demo Air Net is made in the U.S. and sells for a reasonable price at \$30 to \$80 for small to large sizes.

The former Marine Corps jet mechanic learned about moving air while in the service. As a disabled veteran, he now specializes in renovating buildings from the 1800’s, which are filled with coal dust, sediments and other nasty particles.

“The fan motor CFM equals rate of filtration,” Sheehan says. “Look at the size of the target area, figure out the cubic feet and find a fan that moves enough air for control of the

room or exceeds the cubic feet.” By moving lots of air, his nets capture pollutants before they break down to even smaller pollutants.

The net filters an assortment of particles – dry wall, barn dust, concrete dust, animal hair and even volcanic ash.

“The key thing to remember about the fan is that it must be elevated on a stand and have variable speed,” Sheehan says. He’s partial to Ventamatic fans, which are made in Texas.

He has nets for fans ranging from 9-in. dia. to 42-in. fans for very large areas. The nets are machine washable, and Sheehan has used several for years.

“Put this in a room, and it takes control of the air space. It’s like a massive vacuum keeping the air clean, we capture ‘anything’ that floats.” Sheehan says.

Demo Air Net offers a combination pack consisting of a dust proof motor equipped fan, and a filter capable of filtering 4,000 cubic feet of air per minute”. The filter sizes range from \$30 to \$365 for Industrial fan, filter combinations.

**Two Banger bale accumulator picks up 2 bales, one on either side of tractor.**

## Neck-Saving “Two Banger” Bale Grabber

Tired of looking over your shoulder hauling big round bales with a tractor 3-pt. hitch? This new Two Banger bale accumulator picks up 2 bales and drops them in place without a backward glance or change of direction.

Gregg Cooper, CoBra IP, says, “It’s ideal for smaller operators who use them to transport bales from field to farmstead.”

The rear-mount toolbar features a wing with bale spears facing forward on either side. The operator lowers the toolbar to the ground and drives forward sliding the spears under the bales. Once loaded, the toolbar is raised, and the wing folds back on the bar. With the bales now paired and behind the tractor, they can be carried off the field. Simply lower the toolbar to the ground, and the bales slide off.

The Two Banger works with twine or net wrapped bales. The simple design is lubrication free, only requiring hydraulics and a 3-pt. hitch.

“The Two Banger works with a tractor around 100 hp, but the important thing is how much your 3-pt. will lift,” says Cooper.”
