

Steering Stabilizer For Dodge Pickups

Anyone with a late model Dodge pickup will love this "steering stabilizer" kit designed for Dodge 1500, 2500, and 3500 pickups made from 1994 to 2002, and 2500 and 3500 pickups made from 2003 to present.

The kit is designed to provide additional support of the steering sector shaft and eliminate sector shaft play in the steering box. It also helps keep the pickup frame from flexing at the steering box mounting point.

The stabilizer uses existing mounting holes. It adds an outboard support bearing to the sector shaft. This additional bearing is attached to the lower end of the sector shaft by way of a replacement nut which has an integral shaft extension. The bearing supplied is a regreasable high quality unit available at most ag outlets. Nearly all the sector shaft load is carried by this outboard bearing, thus relieving the steering box of much wear and tear.

Installation takes about a half hour and

Installation of stabilizer requires no drilling. It provides support to steering sector shaft and eliminates sector shaft play in steering box.

requires no drilling or welding.

It solves the problem of too much play in the steering sector shaft, and the kit has been popular with owners of both older and newer pickups. It can be used on pickups equipped with snow plows, front receiver hitches, or tow hooks.

The company also offers a retrofit kit for 1994 to 2002 Dodge pickups to allow use of the Solid Steel Ind. rubber bushed track bar. This eliminates one more problem that

plagues these pickups.

The steering stabilizer sells for \$209 (U.S.) plus S&H. It comes with a money-back guarantee. (Toll-free order line: 866 211-1533).

Safe, Quiet, And Economical Space Heater

"The idea has caught on all over the country since your original report years ago. It's amazing," says Harrold Andresen, about his simple do-it-yourself space heater that simply plumbs into a hot water heater.

He got the idea after moving into a house with no furnace. He soon noticed how warm it was in the closet that housed his hot water heater. So he plumbed a coil of copper to the hot water line, put the coil inside a short length of 6-in. flue pipe, and added a small fan. The makeshift heater puts out 80 cu. ft. per minute of 95° heat, enough to add a lot of

warmth to a home or cabin at minimal cost. Best of all, it's clean, odorless and safe.

The Cozy Heater can be easily built in one day. Complete detailed plans sell for \$16.95.
