

## Better Than Drain Tile

The Water Tunnel System is installed on top of the footing. Helps relieve hydrostatic pressure from the walls and under the floor. Less concrete and dirt is removed, drastically cutting installation costs, compared to conventional drain tile systems. The easy to install system, collects the water from the walls and under the floor footing area, channeling it to a sump pump.

The system has no bottom so the inlet notches next to the footing, allows the water in quickly, channeling the water away faster than other similar systems. Why gamble ruining things in your basement. Choose a proven protection that works.

This system has been proven over the last 25 yrs. in most professional football fields. Installed without rock and it doesn't plug. In a basement the company suggests using a little 3/8" pea rock to give you more collection surface so you can flow more water. It requires a lot less labor than regular drain tile systems. Labor is the biggest cost factor in drain tile systems. The Geo channel system uses less materials, also less dirt and broken up concrete is handled, resulting in less cost.

The system is designed to help relieve hydrostatic pressure. Try it, you will like it, especially the extra green you save. Why continue using a conventional drain tile system when the proven Geo channel system takes a lot less labor and will do a professional job?

## Horse Whisperer Teaches Skill To Others

*The only school of its kind in the world!!*

Newly trained horse climbs into pickup.

When Larry Surrett whispers to a horse, it listens.

"I can train a horse to do anything physically possible, whether to jump in a pickup as it drives away or lay down and play dead when you point at it and say bang," says Surrett.

Not only does he train horses, but for the past 11 years he has taught their owners as well. The course at his Minnesota Horse Training Academy is an intensive education, regardless of a horseman's background.

"I had one 74-year-old man tell me he learned more in two days than he had in a life time of working with horses," says Surrett.

He tells of one young woman who came to class with a freshly purchased \$700 horse and trained it in class. A week after the class, she sold it for \$5,000.

"Some people who take the course are professional horse trainers who want to be better, and others just want to connect with their horse," says Surrett. "I have had unbelievable success stories, including one gal who made \$36,000 her first year after the course. She trained horses on the side while staying home with kids."

There are 1, 2 and 3-week programs available ranging from \$1,200 to \$3,600. "We have the best program in the industry with a money back guarantee if you're not satisfied," says Surrett.
