

# Time-Saving Seed Fillers Mount On Deere Planters

Unverferth CCS Planter Fills make constantly climbing stairs a thing of the past for growers who use Deere CCS planters and drills. Time and labor-saving units are available in either a conveyor or auger model.

Variable-speed conveyors are 16'x6" and feature a collapsible hopper and a 6" tube with an 8" cupped and cleated belt for gently unloading up to 12 bushels per minute. The conveyor models for planters feature a gas-spring lift-assist for easy lifting and sliding of the conveyor into the middle of the planter for transport. Conveyors for drills store across the rear of the drill within the transport height and width for enhanced roadway safety.

Auger models feature 18 ft. by 6 in. steel-tube construction for enhanced unloading height and strength. Augers are available with choice of three flighting options. Cupped-steel or cupped plastic flighting moves seed at up to 10 bushels per minute. The auger model locks in place for transport efficiency and safety and fits easily within the transport width of the planter.

Conveniently placed dual on/off controls and standard telescoping downspout on both models allow for easy, one-person filling of the seedbox from the ground platform.

Models are available for 1690, 1890, 1990 CCS drills and 1770, 1790 CCS, NT and DB series planters. Growers should contact their

## Original Grease Buster™ Loosens Up Frozen Fittings

"The Grease Buster™ tool might be the handiest tool to come along since the adjustable wrench. We now have 16 years of satisfied customers," says inventor-manufacturer, Paul Michener.

An aircraft mechanic won a \$2,500 bonus for reducing the cost of maintenance on landing gear on air freighters using the Grease Buster™ tool. It forces solvent into a fitting and/or bearing.

A new pneumatic piston fits only the shop-size Grease Buster. It's powered by a pneumatic hammer. The shop-size Grease Buster, using the pneumatic piston, is much more effective and faster at cleaning out fittings as the pneumatic hammer will produce 30 to 40 hits in the same time one can tap the shop size piston 3 or 4 times with a hammer.

Ordinarily the fitting will either free up instantly, or the process may be repeated

until the solvent has had time to work says Michener, now retired from the hay business. Michener developed the Grease Buster to solve the problem of fittings that would not take grease. Once solvent flows freely into the fitting, grease can then be injected with a grease gun to displace the solvent in the fitting.

The Shop size Grease Buster was introduced in the fall of 2001. It has a 7/16-in. diameter. Overall it's a stronger tool and it has about twice the capacity of the original tool. The Grease Buster tool is available retail or wholesale, with quantity discounting available for bulk orders.

The Grease Buster tool comes with a one-year limited warranty. Using the

tool without solvent or disassembly voids the warranty.
