

“Peel And Stick” Engine Preheater

The “peel & stick” Universal Preheater attaches to the bottom or the side of the oil pan and converts the housing into a heat transfer element. It warms the oil without burning it making cold starts easy. It can be used on gearboxes, transmissions, transfer cases, water tanks and even bulk

oil tanks. The Preheater plugs into any 120 or 240 volt outlet and consists of a thin silicone fiberglass pad containing a metal grid. To install it, you clean an area on the bottom or side of the oil pan and press the pad onto it, then use silicone to seal the edges of the pad and place a flexible ceramic insulation pad over it. It is available in several models depending on the lube capacity. A 50 watt unit sells for \$42 and a 350 watt unit sells for \$133.

NEW: Stop Fuel Gelling At The Filter

The Universal Filter Preheater is designed for diesel fuel filter housings. It wraps around the filter housing and reduces or eliminates the possibility of cold weather fuel gelling stopping the engine. It is easily removable and transferable and is wired for your choice of: direct current or alternating current or a convertible model combining dc and ac. A standard Universal Fuel Filter Preheater is priced at \$138.

Rock beater has a spiral shape, which ensures that 70 percent of the opening in the beater is always open so crop can flow smoothly into rotor.

Rock Kits For Case IH Combines

If you own a Case IH combine, you'll be interested in this new rock beater that's designed to replace the existing rock trap on 60, 80, and 88 series combines.

“It's the most efficient rock beater on the market today, letting more crop material through and allowing you to harvest faster while relieving stress on the rotor and the rest of the machine,” says Carl Vogt, CATO Co., Chokio, Minn.

The new rock beater has a spiral shape which ensures that 70 percent of the opening in the beater is always open so the crop can flow smoothly into the rotor, virtually eliminating back feeding.

“The factory rock beaters on Case IH 60, 80, and the new 88 series combines all have a straight design which reduces how much time the opening in the beater stays open. It's like the difference between a door that opens and shuts all the time, and a revolving door that's continuously open. Our beater opens up the feeding area so you can get more crop material into the rotor and still have good rock protection,” says Vogt.

“These combines were originally designed in the 1980's when most farmers were using 20-ft. headers. At that time farmers were more concerned with rocks causing dam-

Optional bolt-on “shark teeth” can be added to increase feeding ability.

age to the rotor than with feeding the crop through. However, as farmers started using wider headers, the additional crop material started causing bottlenecks at the rock trap. Our rock beater ensures the rock trap isn't the limiting factor in the combine anymore. A lot of farmers have told us they can go 1/2 to 1 mph faster, and start 1 to 2 hrs. earlier in the morning and never have to reverse the feederhouse.”

Bolt-on “shark” teeth can be added to increase the feeding ability in extremely green viney crops. A smooth wearing edge is also available.

Sells for \$1,075 plus S&H.
