

Better Than Drain Tile

The Water Tunnel System is installed on top of the footing. Helps relieve hydrostatic pressure from the walls and under the floor. Less concrete and dirt is removed, drastically cutting installation costs, compared to conventional drain tile systems. The easy to install system, collects the water from the walls and under the floor footing area, channeling it to a sump pump.

The system has no bottom so the inlet notches next to the footing, allows the water in quickly, channeling the water away faster than other similar systems. Why gamble ruining things in your basement. Choose a proven protection that works.

This system has been proven over the last 25 yrs. in most professional football fields. Installed without rock and it doesn't plug. In a basement the company suggests using a little 3/8" pea rock to give you more collection surface so you can flow more water. It requires a lot less labor than regular drain tile systems. Labor is the biggest cost factor in drain tile systems. The Geo channel system uses less materials, also less dirt and broken up concrete is handled, resulting in less cost.

The system is designed to help relieve hydrostatic pressure. Try it, you will like it, especially the extra green you save. Why continue using a conventional drain tile system when the proven Geo channel system takes a lot less labor and will do a professional job?

Pallet Fork Add-A-Grapple

New fork grapple fits standard pallet forks up to 4 in. wide and 1 3/4 in. thick.

Just slide your forks into a pair of tubes, insert locking rods behind the forks to prevent the unit from sliding off, tighten the clamps, and hook up your hydraulic hoses.

An optional log clamp lets you clamp onto one log, pipe or pole at a time. Especially useful for holding one log at a time while you cut firewood at waste level.

Now Available: Second generation Adjustable Pallet Fork Add-A-Grapple. New Model #339S27 has three height adjustments of up to 74 in. so you can even hold on to a large bale of hay.

HyReach Clipper® Cuts Any Wood!

The HyReach Clipper can cut up to a maximum 9 to 12 in. dia. tree or limb in a single cut, depending on the shape. The clipper cuts all kinds of trees including hardwoods. The long reach keeps the operator away from brush and thorns.

The patented clipper can cut horizontally for ground level cutting or vertically for hard to reach limbs. The clipper has been especially useful for clearing fence rows and

removing overhanging limbs along fields. The clipper attaches to most skid steers and tractors as well as other equipment with hydraulics.
