

Crary Tile Pro Plow: Best Tiling Solution In The Industry!

Farmers have long understood the advantages of managing their soil water table by laying perforated tile underground. Key benefits of tiling include the following:

- Higher yields, earlier planting dates and improved crop quality
- Better soil aeration
- Larger, deeper plant roots
- Faster soil warm-up
- Lower nitrogen loss - Less compaction
- Less soil erosion - More consistent crop emergence

To make tile installation a faster, easier process, the Crary Tile Pro tile plow is known for the most accurate and efficient tile installation, offering significant return-on-investment.

Crary Tile Pro Tile Plow

The Crary Tile Pro tile plow has features of big league tile plows but is designed for end users on the farm:

Precise positioning: Optimal and precise positioning of tile is especially important with installations in varying ground conditions. Through its dual-link control, both knife tip pitch and up-down elevation of the Crary Tile Pro are controlled to hold grade with sub-inch (10 MM) accuracy at the knife point. Most pull-type tile plows operate in a pitch-only mode. While dual-link capability is commonly found on commercial tiling plows, this important feature is exclusive to Crary Tile Pro, a fully-mounted plow.

Better stability, maneuverability and pulling capacity: To increase grade control and pulling capacity, the Crary Tile Pro offers much improved traction by securing the plow to the power unit, creating an integrated unit much like a commercial tiling machine. Instead of significant weight placed on the tractor drawbar only, the Crary Tile Pro's weight is set back on the tractor frame, typically above the rear axle. The plow maintains precise slope while transferring significant force and weight back to

Crary Tile Pro...ordered, built, and ready for spring tiling.

tractor, maximizing traction. An optional frame-mounted steerable plow is used for tracked-unit applications and transfers weight to the front for added stability. The plow stays vertical when turning corners.

Easy maintenance: Because the time available to install tile is often short, the Crary Tile Pro is designed for reduced downtime. It is manufactured for easy obstacle removal and meets the need for rapid and simple component replacement.

Easy-to-replace wear-able or changeable parts include the following:

- Quick-tach mounting bracket
- Rapid-change boot
- Replaceable knife facing
- Replaceable knife tip

Two models to choose from: The Crary Tile Pro is available in two models, which provide 6 and 7-foot maximum operating depth. Both models are designed to install 4, 5, 6, 8, 10 and 12-inch tiles.

Crary Tile Pro PF-100 Power Feeder

Stretched tile has a lower operating life and working capacity. The Crary Tile Pro PF-100 Power Feeder helps eliminate tile stretching to maintain the tile strength when the tile is placed in the ground.

Power feeder consistently feeds tile without stretching.

About Crary Agricultural Solutions

Crary Tile Pro also offers stringer trailers, AGPS systems, and tile plow accessories.
