

Chicken Soup™

for the Soil

"Chicken Soup for the Soil® improves your soil by feeding the microbes and supplying all the nutrients most fertilizers neglect."

17-ft tall Tomato Plant - produced over 200-lbs of fruit.
NO pesticides were used, GMO-free, NO added chemicals

Jim Zamzow has harvested as much as 1,000 lbs. of tomatoes from his monster tomato plants that reach 20 ft. high or more, outgrowing his 17-ft. tall tomato cages. He credits sun, space, and the soil-building products he markets under his own Dr. JimZ brand.

For monster tomatoes, he pours on the plant food and dedicates a larger growing area. "I prepare a plot approximately 12 by 12 ft. as the roots from the plant can grow outward as much as 6 ft. from the plant," says Zamzow. "Try to select a place not too close to trees, as they will grow in and steal the nutrients."

"Spread one cup of Tomato Secret inside the framework and water it in with Chicken Soup for the Soil solution every 2 weeks," says Zamzow. "Spray foliage weekly with fermented Chicken Soup tea diluted 1 to 10 with water. Continue this to the end of the season, and you'll have bushels of delicious, nutritious tomatoes."

While Zamzow endorses his own proven methods, he challenges FARM SHOW readers to experiment.

"Variations to what I have done will also work," he says. "Be creative and enjoy growing."

Dr. JimZ products are available online, as well as from select retailers.

Chicken Soup for the Soil contains all the elements in the periodic table (sea nutrients, amino acids, humic, fulvic, and other herbal extracts). It's all natural, toxin free and bioavailable. The non-leaching formula allows nutrients to accumulate over time, perfect for gardeners, growers, and farmers.
