

“Tractor Guard” Window Protection

New Farm Innovation Now Available

Glass breakage in agriculture and the construction industry is a major problem, often leading to unexpected expense and down time.

Now there is a simple, cost-effective solution - TRACTOR GUARD! Launched by U. S. Farm Innovations, Tractor Guard provides an affordable, durable and hassle-free solution to virtually eliminate issues associated with broken glass on farm and construction equipment.

Having won the Farmers' Guardian LAMMA first place award for the most innovative farm invention (UK's leading farm machinery equipment and services

show), patented Tractor Guards are made of clear poly-carbonate similar to police riot shields, according to Lyle Silbernagel, owner of U. S. Farm Innovations. Tractor Guards are 200 times more impact resistant than glass, are weather and UV protected, leading to cooler cabs and added driver comfort. These Tractor Guards can be installed and removed in two minutes. They are custom-fitted to any make and model of tractor, farm equipment, skid steer, or construction equipment. These guards may also add increased operator safety and security.

Tractor Guard window protection systems are designed to protect your tractor's windows from flying debris.

“Innovative Weeder” Allows You To Kill Weeds 3 Ways

“Our NEW 3-in-1 FreedomWeeder takes the back breaking work out of killing weeds around the home or farm,” says Johnny Tuttle, Tieton, Washington. The new FreedomWeeder has combined 3 popular methods used to kill weeds into one light-weight easy-to-use applicator. This patented innovative tool distributes liquid herbicide 3 different ways. To see how it works, you can watch a 2 minute video demonstration at: www.freedomweeder.com.

Freedom Weeder is a 44-in. long high impact resistant translucent PVC tube with a 20 ounce capacity. It does all the reaching for you, saves you from bending over. Its features are:

First - A unique “self-cleaning” spot applicator located at the bottom end, used for killing a single weed with pinpoint accuracy. To use, simply tap on or near the target weed. This spot applicator is designed to perform 2 popular functions:

A. Killing an individual weed by automatically releasing a small amount of herbicide per each tap.

B. Holding it down in place for continual herbicide flow until you release the pressure off the valve by lifting the applicator up and off the vegetation.

Second - A handheld trigger sprayer with an adjustable nozzle is used to spray an area of weeds where and when one would normally use a sprayer. Then when the trigger sprayer is no longer needed, it quickly attaches back to the handle (see photo) for convenient out-of-the-way storage.

Third - A continuous flow drizzle feature is great for killing weeds along driveways, sidewalks, in between patio pavers and crevices, along fences and borders, etc. It eliminates the need for a powered edger which is inherently dangerous.

“FreedomWeeder clearly gives you the choice in how you want to kill weeds,” says Tuttle.” With all 3 methods combined into one easy-to-use applicator, FreedomWeeder has changed the game of killing weeds. One customer wrote, “It’s so easy, it doesn’t even feel like work!”

The company right now has an off-season sale which ends on December 31, 2017. FreedomWeeder is available in 3 colors: Orange, Green, and Clear (not shown) with a one-year limited warranty with each product sold. Plus receive a free organic herbicide recipe which is SAFE for kids, pets, wildlife, and the environment.

FreedomWeeder is a veteran-owned com-

FreedomWeeder hangs from handy storage clip (above) next to the newest product - a fertilizer applicator called Freedom Fertilizer.

pany and all products are made right here in the good ole’ U.S.A.
