## Massey Unveils New Tractor-Mounted Combine

By Mark Newhall, Managing Editor

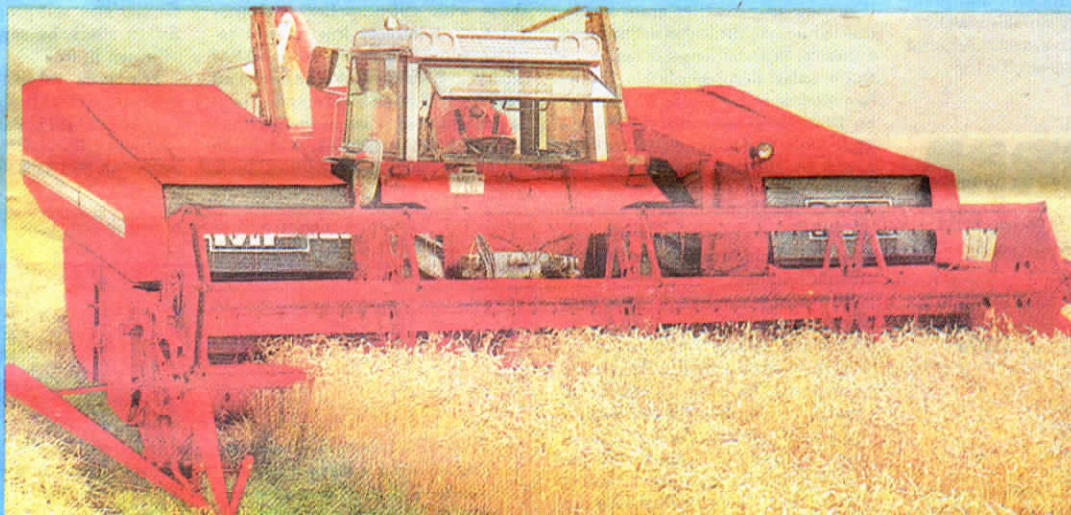

"Saves money and does as good a job or better in most crops than conventional combines," Massey Ferguson representatives told showgoers at the recent DLG Farm Equipment Exhibition in Munich, West Germany, where the company introduced the first full-sized tractor-mounted combine ever built by a major manufacturer.

"Preliminary feedback has already convinced us

that this may be one of the best-selling machines worldwide that we've ever produced," Hermann Riebensahm, an MF European representative, told FARM SHOW in Munich at the DLG Exhibition, one of the largest farm equipment shows in the world.

(For a complete report on other new products from the DLG show in Munich, Germany, see p. 6).

(Continued on next page)

Massey's new combine, with field capacity comparable to biggest self-propelleds on market, divides grain swath in two as it's cut, running it through two separate but identical threshing units up either side of the tractor.
