

Wolf cut pine slabs to size to give his sheds a rustic look.

## Rustic Sheds Feature Pine Slab Siding

Elias Wolf from Mancelona, Mich., sent us some information about his rustic-looking sheds, which feature siding made from cut pine slabs.

"I got a bunch of slabs from my neighbor, who has a sawmill. The slabs made perfect siding for four of our sheds.

"I cut each slab to length, then set it on sawhorses to draw a line down one side using a straight edge. Next, I sawed off each side with a circular saw to make sure they were even and straight.

"Finally, I nailed the pine on top of the OSB on the outside walls. It gives the sheds a nice rustic look. The pine was easy to cut, and it protects the OSB," says Wolf.

He plans to plant more trees on his available acres at home.

"It got me thinking about how many uses

Cut pine slabs used to side sheds to protect the OSB walls.

trees have besides just lumber. If you take good care of the trees, they'll take good care of you," says Wolf.

Lockable, weatherproof storage solution that installs discreetly beneath your truck bed, bolting into factory locations.

## Handy Lockable Bumper Storage

Father-son duo Doug and Brad DeBerti created a secure storage solution for essential items that saves space in both the truck bed and the vehicle's interior.

BumperBox is a lockable, weatherproof storage unit that installs discreetly beneath your truck bed, bolting into factory locations for a seamless fit. The design allows the original bumper to be reattached, and the drawer accommodates the factory spare tire.

Internal drawer dimensions are 30 in. by 30 in. with a depth of 4 in. BumperBox offers customizable storage with various foam inserts for tools, tie-downs, off-road recovery gear, sporting equipment, fishing items, firearms, and more, while maintaining security with its locking feature.

Compatible with all factory-installed 5th wheel or gooseneck hitches, it ensures

no interference with your towing setup. BumperBox moves your factory spare tire while maintaining full functionality, using your truck's original spare tire winch for easy access and storage.

Available for Ford, Chevy, GMC, Dodge and Toyota vehicles, Bumper Box provides a perfect fit for many truck owners. However, it might require minor modifications, such as an aftermarket hitch or mounting adjustments, depending on the vehicle's make and model.

Although it's not available for purchase right now, you can sign up on their website to get notified when they're ready to ship and to receive pricing details.

Adjustable rack using Unistrut channel that lets kayaks be carried above the bed, leaving the bed fully usable.

## Made-It-Myself Kayak Rack

Brian Lanoie from Durham, Maine, was looking for a better way to transport kayaks with his 2018 Toyota Tacoma Access Cab pickup.

"There aren't as many accessories available compared to the double cab. We camp often and like to bring our kayaks, but they consume the whole bed," says Lanoie.

He built an adjustable rack using Unistrut channel that lets kayaks be carried above the bed, leaving the bed fully usable.

"We now have room for the dog, all of our gear, and the kayaks," says Lanoie.

LightRanger provides up to 4,000 lumens to brighten an area up to 100 ft. in diameter and can be controlled via smartphone.

## Portable Light When And Where You Need It

Built for commercial use, the LightRanger 4000 is designed to meet the demands of professionals and DIYers who require brightness, reliability and portability.

Whether you're lighting a workspace, job site, emergency scene, or need extra overhead light for detailed tasks, the LightRanger 4000 provides up to 4,000 lumens to brighten an area up to 100 ft. in diameter.

Its adjustable height from 3 ft. to 10 ft. provides increased visibility and light spread, and it weighs just 6 lbs.

With a runtime of 4.75 hrs. on medium output (2,000 lumens) or 3 hrs. on maximum (4,000 lumens), it has a color temperature of 5000K to simulate daylight.

It can quickly charge via USB-C to 70% in 3 hrs. or 100% in 4 hrs., and it features a tripod design with spring-loaded legs. Ground stakes are included and stored in the tripod feet.

LightRanger features a 74-watt Li-ion battery that can also charge other devices. Its patent-pending design is waterproof, with

a molded protective case and a waterproof zipper. The light's head includes an impact bumper for added protection.

You can control lighting settings on your smartphone via Bluetooth using the Devos app for added convenience. You can adjust individual LED panels and dimming for multiple lights, as well as activate Boost mode for maximum lumens.

A variety of solar add-on panels are available on the website for charging when standard power is unavailable.

Priced at \$350 for the 4000 model on their website, smaller versions are available starting at \$175.

If you're looking for a durable, commercial-grade light that can go where the work is, the LightRanger series might be worth considering.
