

## GENTLY MOVES AIR TO HELP REDUCE HEATING, AIR CONDITIONING COSTS

# Old Fashioned Ceiling Fan

Huge 44 in. long blades of the new "old fashioned" Georgetown ceiling fan rotate slowly (60 rpm's) to gently move air for increased operating efficiency of home heating and air conditioning systems.

The fan, combining old fashioned charm with functional beauty, is designed for quiet movement of room air, and not as a high speed cooling fan, the manufacturer points out. The motor is fully enclosed, making it suitable for use in a covered patio or porch. It draws about 1.5 watts and reportedly costs only about a penny a day to operate.

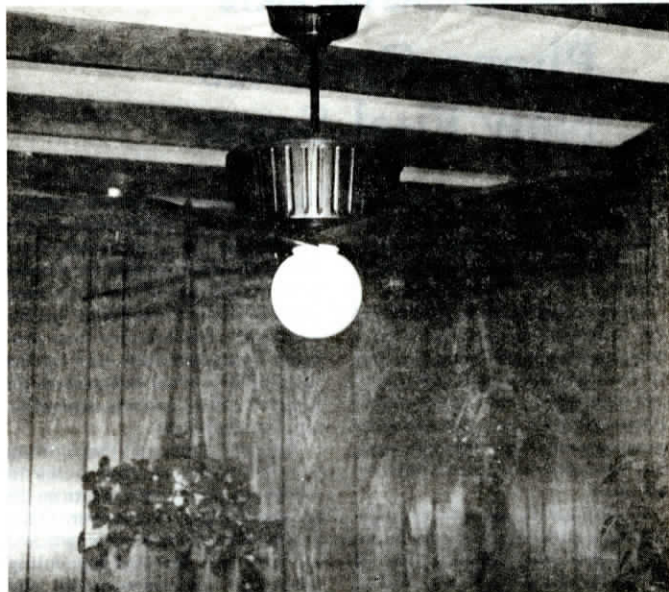

Full span of the blades is 44 in. The unit without a light globe takes only 12 in. of space from the ceiling to the bottom of the fan. The unit with light globe hangs 18 in. from the ceiling. Both models can be purchased with extension rods for hanging farther from the ceiling, if desired.

According to the manufacturer, in-

stallation is as easy as installing a light fixture. Combination fan and light globe units can be installed so the fan and light operate independently, or simultaneously. The fan operates from a wall switch and not a pull chain (nor can it be adapted to a pull chain).

The light-globe on the combination unit is frosted and is a standard model, replaceable at most hardware stores. It accommodates a 75 watt bulb. Colors available include walnut (rich dark brown) or oak (medium light golden brown), wood grain, bright yellow or white. Suggested retail is \$74.90 with the light globe, \$59.95 without, plus \$7 for shipping and handling.

For more details, contact: FARM SHOW Followup, Georgetown Fan Co., Box 2128, 2800 First National Bank Bldg., Denver, Colo. 80201 (ph toll free 800 648-5311).

Fans purchased with or without the light are available with extension for hanging the unit up to about 4 ft. from the ceiling. Fan turns slowly at 60 rpm to gently stir room air.

## SIZES TO FIT ADULTS, CHILDREN

# "Proud Farmer" Shirts for Farm Families

Colorful shirts designed to help you and your family tell the world that you're proud to be American farmers are new from Flor Art Studios.

The message is imprinted in bright red and blue colors on a white athletic-styled jersey which has 3/4 length blue raglan sleeves. White Hanes T-shirts imprinted with the same message in red and blue are also available.

Both the jerseys and T-shirt are available in the following adult sizes: Small (34-36); Medium (38-40); Large (42-44) and Extra Large. Children sizes are: Medium (10-12); Large (14-16); and Extra Large (small adult).

Cost of the jersey shirt is \$8.50 each, plus 75 cents postage and handling. The T-shirts sell for \$5 each, plus 75 cents postage and handling. Subtract 50 cents each for either shirt when you order two or more.

For more details, contact: FARM SHOW Followup, Flor Art Studio, 7101 York Ave., Minneapolis, Minn. 55435 (ph 612 831-3333).

The "I'm Proud To Be An American Farmer" message is imprinted in red and blue letters on a white background. Available in athletic-styled jerseys or T-shirts.

## INSULATED WOODEN BOXES RETAIN HEAT

# Northwoods Cooker Cuts Fuel Cost 75%

"The principle is simple," explains Bonnie Arnold, developer of the new Northwoods Cooker which requires "60 to 75% less energy to prepare foods than conventional cooking."

"When any food has reached its boiling point, all that's necessary is to keep it at that temperature until the completion of cooking," Bonnie points out. "This is accomplished by boiling the food for a designated time in a tightly covered container, then putting the bubbling food into the inner compartment of the Northwoods Cooker."

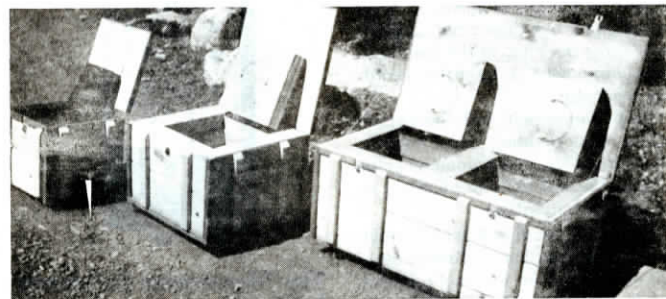

The cooker is sufficiently insulated to retain cooking temperature. The process, which takes from two to three times longer than normal cooking time, is self-tending and frees the cook to do other things. There is no need for an electrical hookup.

Portability is one of the key advantages of the Northwoods Cooker, says Bonnie. It can be filled early in the day with the noon or evening meal, then placed into the trunk of a car or pickup and carried to the field to feed workers, taken along on picnics, trips or whatever. In addition to cooking foods, it will also keep chilled foods cold for long periods of time.

Suggested retail cost is \$59.95 for a small model; \$89.95 for a medium size model, and \$139.95 for a large double-compartment model.

"At present, we're custom making the Northwoods Cooker and require 60 to 90 days for delivery," Bonnie told FARM SHOW.

For more details, contact: FARM SHOW Followup, Northwoods Cooker, Bonnie Arnold, Tofto, Minn. 55615 (ph 218 663-7223).

Boiling hot food is placed in the Northwoods cooker, which is heavily insulated to trap and retain cooking heat given off by the food.
